--- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
--- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                Monson J.M., McCarthy B.J.;

-!- FUNCTION: Type I collagen is a member of group I collagen
(fibrillar forming collagen).
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and
bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PTM: Proline residues at the third position of the tripeptide repeating unit. (G-X-Y) are hydroxylated in some or all of the chains: Pro-1153 is the only 3-hydroxypro and the only hydroxylated proline in position. SIMILARITY: Contains 1 WWPC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pfam; PF00093; vwc; I. -!- FUNCTION: Collagen type II is specific for cartilaginous tissues.
-!- SUBDNIT: Homotrimers of alpha 1(II) chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                            Isold=P28481-2; Sequence=VSP 001139, VSP_001140;
-!-PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- SIMILARITY: Contains 1 VWFC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..

-1- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-1- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        οĘ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE OF 295-562.

Nucleic Acids Res. 11:2733-2744(1983).

-!- FUNCTION: Collagen type III occurs in most soft connective tissues along with type I collagen.

-!- SUBBUIT Trimers of indentical alpha 1(III) chains. The chains are linked to each other by interchain disulfide bonds. Trimers are also cross-linked via hydroxylysines.

-!- FUNT Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY).

"The order of the CNBr peptides from the alpha 2 chain of collagen.";

Biochem. Biophys. Res. Commun. 38-703-708 (1970).

-! FUNCTION: Type I collagen is a member of group I collagen

(fibrillar forming collagen).

-!- SUBUNT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-!- SUBUNT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                        Fietzek P.P., Piez K.A.; "Isolation of the cyanogen bromide peptides from "Isolation and characterization of the cyanogen bromide 2 chain of rat skin collagen."; Blochemistry 8:2129-2133(1969).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      딩
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Molecule type: protein
A; Realduse: 33-26 wIRs
A; Residuse: 33-26 wIRs
A; Note: this propeptide fragment remained non-covalently bound to a defective, uncleaved
B; Mote: this propeptide fragment remained non-covalently bound to a defective, uncleaved

Collagen alpha 1(II) chain precursor [imported] - horse

N.Alternate names: type II collagen

N.Alternate names: type II collagen

C.Species: Equal caballus (domestic horse)

C.Species: Squal caballus (domestic horse)

C.Accession: T45467

R.Richardson, D.W.; Dodge, G.R.

R.Richardson, D.W.; Dodge, G.R.

Submitted to the EMBL Data Library, June 1996

A.Description: Cloning of equine type II collagen and modulation of its expression in equal parts of the EMBL Data Library, June 1996

A.Reference number: 222977

A.Reference number: 222977

A.Reference type: MRNA

A.Molecule type: MRNA

A.Molecule type: MRIC>

A.Residues: 1-1418 - RIC>
